

# AJAX ALARM SYSTEM USER GUIDE

The following is GSD's instruction manual for using the Ajax Alarm system, including instructions on how to arm / disarm your Ajax alarm, along with user tips on how to fix your Ajax system.

### How to set your Ajax alarm

#### > Using keypad

You have to wake up the Ajax KeyPad first, touch the keyboard: the backlight will switch on, and the beeper sound will indicate that KeyPad has woken up. Enter your **4 digit code** and press the **arming button**  $\bigcirc$ 

If you do not touch the keyboard for 4 seconds, the Ajax key pad dims the backlight, and after another 12 seconds, the device switches to the sleep mode.

#### > Using the optional Keyfob (Space Control)

Press  $\bigcirc$  once on your Ajax fob and exit premise, once you step out of premise you will receive notification that system was successfully set.

Press O twice if you are already out, you will receive notification that system was successfully set.

#### > Using mobile application

Open the Ajax user app and go to "control" tab where you can find virtual Fob and use it to arm system, by pressing the  $\bigcirc$  button.

# How to unset your Ajax alarm

#### > Using keypad

Wake up the keypad by touching any digit on it, enter your code and press ) button

#### > Using the optional Keyfob (Space Control)

Press ) button on the fob

#### > Using mobile application

Open the Ajax user app and go to "control" tab where you can find virtual Fob and use it to disarm system.

# How to night set / part set your Ajax alarm

#### > Using keypad

Wake up the keypad by touching any digit on it, enter your code and press button

# > Using the optional Keyfob (Space Control)

Press () on the Fob to set Night mode where some sensors are omitted.

#### > Using Mobile application

Open the Ajax user app and go to 'control' tab where you can find virtual Fob and use it to disarm system.
